Light-Duty Vehicles Accounted for the Majority of Transportation Energy Consumption

In 2016, light-duty vehicles accounted for 58.5% of transportation energy use while medium/heavy-duty trucks and buses accounted for 23.9%. Air transportation was the only other mode accounting for more than 5% of transportation energy use. The majority of fuel used in transportation was gasoline and diesel fuel, used not only for highway vehicles but also in rail, water and air modes.
